

Denosumab
Solution for injection
Subcutaneous use.

Patient Reminder Card for Osteonecrosis of the Jaw

This reminder card contains important safety information that you need to be aware of before and during treatment with denosumab **Wyost**.

Your doctor has recommended that you receive denosumab Wyost injections to help prevent bone complications (e.g. fractures) caused by bone metastases, or bone cancers.

A side effect called osteonecrosis of the jaw (ONJ, bone damage in the jaw) has been reported commonly (may affect up to 1 in 10 people) in patients receiving Wyost for cancer-related conditions ONJ can also occur after stopping treatment.

It is important to try to prevent ONJ developing as it may be a painful condition that can be difficult to treat.

To reduce the risk for ONJ, there are some precautions you should take.

Before starting treatment:

Tell your doctor/nurse (health care professional) if you have any problems with your mouth or teeth.

Your doctor may ask you to undergo a dental examination if you:

- Are a smoker
- Have cancer
- Have not had a dental check up for a long time
- Have problems with your mouth or teeth

While being treated:

- You should maintain good oral hygiene and receive routine dental check-ups. If you wear dentures you should make sure these fit properly.
- If you are under dental treatment or will undergo dental surgery (e.g., tooth extractions), inform your doctor and tell your dentist that you are being treated with Wyost.
- Contact your doctor and dentist immediately if you experience any problems with your mouth or teeth such as:
 - Loose teeth
 - Pain or swelling
 - Non-healing of sores or discharge

As these could be signs of osteonecrosis of the jaw.

Please read the package leaflet that comes with your medicine for further information.

By reporting side effects, you can help provide more information on the safety of **Wyostr**.

If you get any side effects, talk to your doctor, pharmacist, or nurse. This includes any possible side effects not listed in this leaflet.

You can also report side effects directly via
